

Get Incentives for Energy-Efficient Equipment & Custom Projects

The **PSE&G Business Energy Saver Prescriptive and Custom Program** offers incentives for the installation of energy efficiency equipment while allowing flexibility for innovation in custom energy-saving projects. The program provides for a comprehensive solution for energy-efficient products with energy and peak demand savings.

Upgrading outdated equipment is a great way to start reducing energy use in commercial facilities. Newer equipment uses less energy and reduces unplanned maintenance, saving customers money on their bill and on their operational expenses. PSE&G offers a variety of incentives for pre-qualified energy-efficient equipment, including lighting, appliances, HVAC systems, food service equipment, and more.

Customers looking to purchase qualifying equipment can visit a participating distributor to access instant incentives at the point-of-sale or apply for a rebate on purchased and installed equipment through our online application. All qualifying equipment is eligible for interest-free, on-bill repayment plans, so you can enjoy the benefits of an efficient facility today while repaying for your project over five years.

PSE&G authorized contractors, in coordination with a robust network of trade allies will work directly with businesses to maximize energy efficiency. Customers may also use their preferred contractor once eligibility requirements are met, and still be in line for program rebates.

Apply for Incentives and On-Bill Repayment

Fill out our online application to take advantage of:

- + Financial incentives on installed energy-efficient equipment and solutions
- + Interest-free, on-bill repayment plans, so you can enjoy the benefits of an efficient facility today while repaying your project over five years.

1 Project Application and Review

Once you have the scope of work finalized for your project, you or your contractor can submit an incentive application and the project will be reviewed for eligibility within two business days by DNV, a PSE&G contractor. The process includes a pre-install review which may require a site visit where measurements and supporting data may be collected, to include in the final application. Data collected during the inspection will be used to determine eligibility.

2 Measure Review and Project Implementation

Once a review is complete and your project is approved, incentive funds will be reserved for 90 days. If you and the contractors are unable to complete the project within that time frame, you may apply for a 30-day extension. If your project needs require additional time, an additional extension may be granted subject to PSE&G approval.

3 Proof of Completion and Final Project Review

After the project is complete, a final application that includes all invoices showing material and labor cost breakdowns is submitted. The completed project will be reviewed against the measurement and verification plan set forth during the pre-install review, and a post-project inspection that could include additional measurements and data collection may be required.

4 Receive your Incentive

Incentive checks will be mailed out once all reviews of submitted applications and required inspections have been finalized and approved.
